Glowing gas and dust remain after a giant star ended its life in a supernova. This image shows the object in X-rays, combined with radio waves and infrared data. Scientists think the supernova may have left a black hole at its center! This is the sort of mystery that NASA's Astrophysics Division loves to explore. Learn about some of these mysteries at [spaceplace.nasa.gov/menu/space](http://spaceplace.nasa.gov/menu/space).
